FIFTY-FOURTH ANNUAL COAL REPORT.

INTRODUCTION.

Herewith is presented the fifty-fourth annual report of the coal industry of Illinois, together with reports of all other industries which come under the supervision of the Department of Mines and Minerals.

The number of coal mines, both shipping and local, which operated in Illinois during 1935 reached the highest figure attained during the five year period 1931 to 1935 inclusive, and the coal produced by all mines, 45,013,278 tons, is the highest production for the industry in this State since 1931.

The coal industry in this State has passed through the third successive year without a major disaster. Tonnage of coal mined per fatality reached the highest figure since the year 1931, and the tonnage mined per compensable non-fatal accident is the highest figure recorded during the five years 1931 to 1935 inclusive. The interest on the part of operators and men in safety prevention work and first-aid training continues high and it is gratifying to the Department to be able to announce that this year special recognition by way of Joseph A. Holmes Safety Awards came to seven Illinois coal operators for their establishment and maintenance of outstanding safety records, as well as awards to individual employes of three other companies. Two other Holmes Awards were issued to organizations in the refinery industry. All of these awards are separately listed in an appropriate section of the report.

Throughout the year the Department enjoyed the helpful cooperation of Mr. Charles A. Herbert, Supervising Engineer, United States Bureau of Mines Safety Station, Vincennes, Indiana, and his able corps of assistants, and takes this opportunity to express its appreciation for the help of these gentlemen in the conduct of first-aid training and safety prevention campaigns.

Through the courtesy of the State Geological Survey at Urbana there are reproduced on the following pages, three coal flow blue prints prepared by that Department and published in its Bulletin No. 63 and in less final form in the 1934 Report of the Illinois State Planning Commission. These blue prints show the destination of revenue rail shipments of bituminous coal mined in Illinois as well as origin and ports of destination of Great Lakes cargo shipments and origin and destination of revenue rail shipments of bituminous coal from points outside Illinois, which moved into and through this State during the year 1932. The data from which these blue prints were prepared were compiled by the United States Bureau of Mines.

GENERAL STATEMENT

1935—WITH COMPARATIVE FIGURES OF FOUR PREVIOUS YEARS.

	1935	1934	1933	1932	1931
Number of counties producing coal.....	57	58	53	54	48
Number of mines operated.....	1,350	1,347	1,266	1,093	994
Number of shipping mines.....	182	172	159	162	167
Number of local mines.....	1,168	1,175	1,107	931	827
Output in tons, all mines.....	45,013,278	41,724,078	38,320,125	34,120,786	45,152,623
Output in tons, shipping.....	41,410,414	38,655,527	35,390,677	31,402,399	43,073,058
Output in tons, local.....	3,602,864	3,068,551	2,929,448	2,718,387	2,079,565
Tons handled by railroads.....	36,844,180	34,730,011	31,636,128	28,519,261	39,940,793
Tons disposed of otherwise.....	8,169,098	6,994,067	6,683,997	5,601,525	5,211,830
Number employed underground.....	39,572	40,340	40,086	43,630	45,652
Number employed on surface.....	9,528	9,159	8,368	7,924	7,898
Total employees.....	49,100	49,499	48,464	51,554	53,550
Average days worked, shipping mines.....	147	147	131	107	130
Average days worked, local mines.....	107	118	118	127	123
Number of mining machines in use.....	1,139	1,149	1,118	1,246	1,459
Tons undercut by machines.....	32,288,925	30,519,760	28,051,231	23,201,707	33,161,198
Tons mined by hand.....	5,243,004	4,982,074	4,554,589	4,162,122	5,371,522
Tons mined by stripping.....	7,481,349	6,222,244	5,714,305	6,756,957	6,619,903
Number of mechanical loaders in use.....	1,626	1,621	1,752	2,280	2,420
Tons loaded mechanically.....	20,651,707	18,600,174	17,766,216	15,412,656	22,445,802
Kegs of powder used for blasting coal.....	256,296	289,164	230,721	215,778	295,760
Pounds of pellet powder used.....	5,276,649	4,764,606	3,988,617	2,940,722	4,540,477
Pounds of dynamite used.....	351,532	99,706	71,963	125,750	115,395
Pounds of permissible explosives used.....	2,188,214	1,877,380	1,760,985	1,699,636	2,406,186
Number of motors used in underground haulage.....	1,137	1,156	1,044	1,117	1,205
Number of animals underground.....	1,437	1,414	1,388	1,418	1,503
Number of fatal accidents.....	82	86	71	114	90
Number of non-fatal accidents.....	3,147	3,133	3,018	2,743	3,809
Tons mined to one man killed.....	548,942	485,164	539,720	377,834	501,696
Tons mined to one man injured.....	14,304	13,318	12,697	12,884	11,854
Number employed to one killed.....	599	576	683	452	595
Number employed to one injured.....	16	16	16	20	14
Number of mines using closed lights.....	20	21	20	19	22
Number of mines rock dusted.....	26	29	25	34	35

The following is a brief account of an accident which occurred on April 3, 1935, at the quarry of the Mississippi Lime & Material Company at Alton, Illinois, which resulted in the loss of the life of Bernard Wiltshire, an employee of this organization. The case presented some difficult recovery problems, in which several Inspectors of the Department assisted, and wide publicity was given to the work.

The scene of this accident was a limestone quarry-mine near the Mississippi River within the city limits of Alton, Illinois. Here a stratum of limerock fifty to sixty feet in thickness was overlain with from thirty-five to sixty feet of overburden and at one time underground mining operations of this limerock had been carried on, the workings then being ventilated by a natural crevasse in the earth and limerock which was used as an air shaft. When underground work was abandoned and stripping operations begun the quarry company decided to fill up the crevasse and dirt and rock was being hauled in trucks from the stripping work to the sink hole or crevasse. Deceased was employed as dump foreman at this hole or crevasse and early in the afternoon of April 3rd had lined up a truck of refuse which was driven up to be dumped. The truck driver had just prepared to unload the dirt and rock when he felt the truck lurch and settle and he immediately jumped and ran to safety, at the same time calling out a warning to stop to another truck which he saw approaching the hole. The dump boss, Wiltshire, had been standing on the ground behind the first truck at the time the driver felt it lurch and settle, but everything indicates he was swallowed up and disappeared

immediately when the earth gave way. The seven ton dump truck also began to sink further into the hole but was perhaps some fifteen minutes in entirely disappearing from view. Meanwhile help for Wiltshire had been brought, but it was soon decided that nothing could be done for him from the surface and crews of men were set to work underground digging in the debris at the bottom of the hole or crevasse. The accident was brought to the notice of the Department on April 4 by a report made to State Mine Inspector T. Alvin Scully, Troy, Illinois, by Madison County Mine Inspector John O'Hara, of Collinsville, both of whom proceeded to Alton to give what assistance they could. Inspector Scully notified Economic Investigator Benn Pitts, of Odin, Illinois, who proceeded to the scene of the accident early April 5 and volunteered his services. Director McSherry conferred with company officials, with the State Inspectors and County Inspector O'Hara at Alton and the decision was reached to substitute an electric shovel to move the debris at the bottom of the hole instead of resuming the hand-shovel method, which was slow and dangerous. An ore-finder had meanwhile been employed to locate the truck and it was hoped that the body of the unfortunate boy would be found near the truck, though nobody believed he could be recovered alive. Interrupted only by heavy rains and subsequent movement of the earth and rock in the sink-hole and on one occasion by a mechanical breakdown on the shovel, work was kept up twenty-four hours a day until the body of Wiltshire was recovered about 5:30 P. M., Saturday, April 20, about eighty feet from the spot where the truck was recovered on Sunday, April 7. Everything indicated the boy had been instantly killed in his fall into the hole.

The verdict of the coroner's jury decided death was accidental, the result of giving way of the earth around a sink hole being filled with refuse from the workings of a quarry where deceased was employed as dump boss.

To prevent similar accidents it is recommended where work of filling sink holes or crevasses of the kind is being done, a solid foundation, possibly of steel or concrete, should be started at the bottom of the hole. Assistant Director Martin, who personally supervised this recovery work, believes this accident could have been obviated and that future cave-ins of this nature would never occur if sufficient foundation were provided at the bottom of the hole or crevasse. His specific recommendation in this case is as follows:

"That a rock retaining wall be constructed underground from the floor of the mine to the roof, to be made as nearly water tight as possible, and that at the top of the cap rock the hole where the boy and truck went through be reinforced with a strong concrete or cement composition sufficient to sustain the weight of the material—dirt or whatever it is—that is used to fill the hole up level with the surface, thus obviating the possibility of a break through ever again occurring."

JOSEPH A. HOLMES SAFETY ASSOCIATION AWARDS.

For the establishment and maintenance of outstanding safety records in Illinois coal mines, the following operating organizations received Joseph A. Holmes Safety Association Certificates for the year 1935.

Northern Illinois Coal Corporation, Wilmington, Illinois.

Mine No. 59, Peabody Coal Company, Springfield, Illinois.

Kathleen Mine, Union Colliery Company, Dowell, Illinois.

Mine No. 11, United Electric Coal Company, DuQuoin, Illinois.

Mine No. 15, Consolidated Coal Company of St. Louis, Mt. Olive, Illinois.

Mine No. 3, Superior Coal Company, Gillespie, Illinois.

Mine No. 1, Valier Coal Company, Valier, Illinois.

In addition to the above, awards were granted to the following individuals for employment over unusually long periods of time without sustaining lost time accidents:

Evan W. Evans, Miner, Valier, Illinois.

James E. Hutton, Miner, Peoria, Illinois.

Thomas E. Vaughn, Harco, Illinois.

Holmes Awards were also made to two large organizations operating in the petroleum industry, namely, The Lawrenceville Refinery, Indian Refinery Company, Inc., Lawrenceville, Illinois, and the Ohio Oil Company Refinery, Robinson, Illinois, for having worked a year or more without a lost time accident.

STORY OF STRIP MINING IN ILLINOIS.

By L. B. SHELEY.

The story of strip coal mining has a peculiar connection with the history of coal in Illinois, not only because of its position in the production of coal in the State, but also because it was in what is now known as the State of Illinois that coal was first discovered in America, the discovery being made near the same field where, after many discouraging efforts and over a long period of years, the dauntlessness of mining men was finally to conquer and make coal stripping a practicable and profitable industry.

Coal was first discovered in America in the 17th Century somewhere between the present cities of Ottawa and Utica, Illinois. Some historians credit Father Louis Hennepin, a French explorer, with the first discovery of coal in America and fixed the date as 1669; other writers make the statement that the first discovery of coal was made by Fathers Marquette and Joliet in 1673.

The first government records of coal production in the State of Illinois covered the year 1833 and show the amount mined that year as 6,000 tons. In 1934, 101 years later, the amount produced in this State was in excess of 40,000,000 tons, of which total 6,222,000 tons was produced by strip mine operations.

Coal stripping is the outgrowth of the efforts of men who used to gather coal at the outcroppings of the coal seams and sought to follow the seams by removing the earth with hand shovels as the coal slowly descended farther and farther into the earth. When the seam descended too far for the use of dirt shovels in the hands of workers, teams with scrapers were brought into use in mining. First the slip scraper then the wheeled scraper and finally powered stripping equipment was introduced.

Kirkland, Blankey and Graves was the firm name of the group first to attempt strip mining near Danville, Illinois in 1866, while it was in the seventies that Michael Kelly first used the hand shovel method and then introduced teams and scrapers in Hungry Hollow in the same vicinity. The method used was to strip the coal in summer and mine it in winter, even in the earlier years of powered stripping; but the introduction of powered shovels made it possible to remove frozen overburden from coal seams and continue operation both winter and summer. In the early days when scrapers were used the ground was first plowed then scrapers removed the dirt, first the one implement and then the other being used until the coal was uncovered. Teams and wagons were used to haul the coal from the pit. Today locomotives, in some instances operating on standard gauge railroad tracks, pull most of the coal that is mined in Illinois' strip pit operations.

Strip mining methods were early applied to the production of coal in other states as well as Illinois, and Director McSherry of the Illinois Department of Mines and Minerals, can speak with authority about the early beginning of the strip mining industry in the State of Kansas. Having been born in Scranton, Kansas, he became familiar with strip mine operations in the vicinity of that city. As early as 1867 coal which was mined in draws and ravines in the vicinity of Scranton was being hauled as far as Lawrence, Kansas, a distance of 40 miles, before railroad facilities had been extended to that part of the country. At Lawrence, the coal was traded for food and merchandise.

The Consolidated Coal Company was one of the first organizations to begin strip mining in the Danville field on a large scale. Wright and Wallace, a Lafayette, Indiana, drainage contracting company received a contract from the Consolidated Coal Company to conduct some of its operations. A dredge without a hull was purchased and erected on a wooden frame. This dry land dredge had a wooden boom fifty feet in length, with a capacity of 400 cubic yards per day and was operated with a one cylinder steam engine. The outfit was moved forward with a block and tackle, the shovel dug forward only and moved over the field in a circle making a twenty foot cut. A second and later a third installation of this kind were put in operation, the latter having a 65 foot boom. These were abandoned in 1890, the operation having proven unsuccessful financially.

Draglines were introduced into the Mission Field, near Danville, in 1890. The scraper buckets were of steel with open ends and teeth at the bottom edge. Cables raised and lowered the buckets and guided them, the forward and reverse motion being governed by ropes. Another cable was used to swing the drag down to dump its load. The cables were strung on a horizontal boom eighty feet in length. The bucket was lowered into the pit and dragged up the side to fill, being capable of three complete operations in a minute. The boom did not swing and the machine had to be moved frequently and much track work was required to

keep the machine setting solid. Twenty foot cuts were made and the waste was dumped far enough from the cuts to prevent caving back over the coal. After the first operation the waste was deposited in cuts that had already been mined. In this particular section of the Mission Field there was no shale or overburden and an output of over 1,000 tons a day was accomplished. It was here the first machine mining was done, with one machine stripping the coal and another loading it into gondolas in which it was carried to the tippie. However, the project was abandoned when shale was encountered. In 1900 Butler Brothers had built a \$30,000 drag line, three buckets, for use near Danville. The three drag buckets were respectively for dirt, for coal and for rock, the capacity being two cubic yards for each bucket. The machine was a failure because it was too cumbersome and because the bucket for stone was not practical. While other stripping shovels were introduced in this field they were not successful until about twenty-five years ago, when Hartshorn and Holmes, of the Mission Field Coal Company, induced the Marion Steam Shovel Company of Marion, Ohio, to build a 250 ton shovel with a 65 foot boom and with a three and one-half cubic yard dipper with fifty foot handle. The machine was built to swing the shovel in the arc of a circle. This shovel was placed in the Danville Coal Field in 1911 and is still in use there. The advent of this shovel, the first of its type, brought strip mining to the status of a practical and profitable industry after many discouraging and financially disastrous efforts, going back almost half a century.

The No. 250 shovel, above referred to, was steam driven and mounted on railroad truck wheels and was equipped with hydraulic equalizing and leveling jacks, outside boom, inside handle and triple hitch hoisting cables, most of these being fundamental features and still employed in the modern shovels of today.

It was in 1923 that the first Ward-Leonard electrically driven shovel was installed in this State. It was purchased by the Black Servant Coal Company of Elkville with which Mr. Hartshorn of Danville was also identified. The use of electrically powered shovels is extensive in the strip mines of today.

In 1925 the first large crawler shovel for coal stripping was installed at Cuba, Illinois. It was equipped with a single reduction herringbone hoist gear and was installed at the property of the United Electric Coal Company.

In 1928 the first 12 cubic yard shovel was installed at Wilmington by the Northern Illinois Coal Corporation and in 1935 this same company installed at its workings near Wilmington a new shovel with a 32 cubic yard dipper, said to be the largest in the world. This is one of the Illinois companies that produced a million tons of coal in 1935, and recently extensive improvements have been made in the facilities of this organization.

This briefly pictures the advancements in coal stripping from its earliest days down to the present. In 1935 more than 16 percent of the coal produced in Illinois came from strip mines.

The appointment of James McSherry of DuQuoin, formerly head of the Perfection Coal Company of that city, a strip mining organization, to the office of Director of Mines and Minerals marked the first recognition of the strip mining industry to that important office.

FATAL ACCIDENTS.

October 10, 1934, died February 25, 1935, James A. Reel, driver, aged 57 years, married, from injuries received when crushed between car and rib in mine No. 3 of the Skinner Coal Co. He leaves a widow.

February 15, John Jisa, miner, aged 59 years, married, killed in mine No. 3 of Skinner Coal Co. by fall of rock. Leaves a widow and two dependent children.

August 20, Peter Ricchardi, miner, aged 73 years, widower, killed by fall of rock in Union mine of Union Coal Co., leaving no dependents.

September 13, Joseph O'Berle, laborer, aged 33 years, married, electrocuted at mine No. 1 of the Midland Electric Coal Corporation, leaving widow and two dependent children.

October 17, Frank Heinrich, miner, aged 48 years, married, killed by fall of rock in mine of Wm. T. Lamb & Son, leaving widow and two dependent children.

December 16, George W. Edwards, shot firer, married, aged 45 years, killed by explosion of dust in mine No. 1 of the Shuler Coal Mining Co., leaving widow and two dependent children.

ONE HUNDRED PERCENT FIRST AID TRAINING.

During the year 1935 One Hundred Percent First Aid Training campaigns either begun or completed at our Illinois Mine Rescue Stations included the following:

Chicago, Wilmington & Franklin Coal Company, Mine No. 1, Orient.

Chicago, Wilmington & Franklin Coal Company, Mine No. 2, West Frankfort.

City of Benton Fire Department.

Peabody Coal Company, Mine No. 14, DuQuoin.

Peabody Coal Company, Mine No. 15, DuQuoin.

Peabody Coal Company, Mine No. 19, West Frankfort.

Peabody Coal Company, Mine No. 47, Harco.

Wasson Coal Company, Mine No. 1, Harrisburg.

Wasson Coal Company, Mine "A", Harrisburg.

First Year Students of Carlinville Community High School.

Employees of Department of Public Works and Buildings, State of Illinois.

The Department has been fortunate in having the cooperation of the United States Bureau of Mines Safety Station at Vincennes, Indiana, and takes this opportunity to express to Mr. Charles A. Herbert, Supervising Engineer of the Vincennes Station and his able corps of assistants its appreciation for the cooperation accorded the Mine Rescue Station Superintendents.

During 1935, Mine Rescue Station Superintendents and Mine

Rescue Station Teams responded to the following calls for assistance:

BENTON STATION.

July 6th—Superintendent with Mine Rescue Team answered a call to Old Ben Mine No. 8, West Frankfort, Illinois, to open seals and explore fire area.

July 17—Call from Lake Moses, three miles northeast of Benton, Illinois, for station inhalator, which was used in an effort to revive Ladine Bryant, aged 18, drowned. Efforts to revive were unsuccessful, as body of the boy was not recovered until one hour and fifteen minutes following his having disappeared in the lake.

September 16—Seventeen months old daughter of Ray Wilkerson was brought to the station by her father, and station superintendent attempted to revive the child who had been drowned in six inches of water in a jar of eight gallons capacity on the Wilkerson farm some five miles from Benton. Efforts to revive the child were unsuccessful as considerable time had elapsed from the time she was recovered from the water until the time she was brought to the station.

October 9—Superintendent responded to a call from New Orient Mine for the inhalator and assisted under C. H. Williams and officials of the Chicago, Wilmington & Franklin Coal Company, in an effort to revive William Rice, who was unconscious as a result of having come in contact with a trolley wire while climbing from a man trip. Efforts to revive were of no avail.

BELLEVILLE STATION.

No calls received.

DUQUOIN STATION.

June 2—Station Superintendent and his Team Captain answered a call from yardmaster Goddard, of the Illinois Central Railroad, to rescue and revive a young boy who had entered an empty railroad tank in the yard and had been overcome by fumes from the tank. Considerable difficulty was experienced in the rescuing of the body from the interior of the tank, but after this had been done artificial respiration was administered with the use of the inhalator. The boy, whose name was Clyde McGinnis, could not be revived and everything indicated he was killed instantly as a result of breathing noxious fumes in the empty tank.

ELDORADO STATION.

October 22—Station Superintendent answered a call from Peabody Mine No. 47, at Harco, for the inhalator and administered artificial respiration with the use of the inhalator to attempt to revive an employe of the Peabody Company who was electrocuted

through coming in contact with a trolley wire. About an hour and a half had elapsed between the time the unfortunate man was electrocuted until the Superintendent could arrive at the mine with the inhalator and begin efforts to revive him. However, the inhalator was used in connection with artificial respiration for about an hour, but to no avail. The doctor in attendance declared the patient dead.

HERRIN STATION.

November 3—Superintendent and Team Members answered a call from the Consumers Coal Company and rescued one Bennie Johnson from old workings of Peabody No. 3 mine to which he had wandered through a hole cut into these old workings by the Consumers Company.

JOHNSTON CITY.

May 16—Superintendent received a call at 2 P. M., and with one of his team members proceeded to Goreville with the inhalator and attempted to revive Billie Roe Stanley, who had been drowned by falling in a well. Artificial respiration with the inhalator was begun on this boy at 2:25 P. M. and kept up for about two and one-half hours, but without any success in reviving him.

July 6—Superintendent and Team Members assisted the Benton Mine Rescue Team in opening up fire seals at Old Ben Coal Corporation, Mine No. 8, West Frankfort.

LA SALLE STATION.

March 8—Superintendent answered a call to St. Mary's Hospital, LaSalle, Illinois, administered oxygen from inhalator and gave artificial respiration to Mrs. C. D. Charlton. Patient could not be revived. Physician ascribed as cause of her death, brain tumor pressing on respiratory nerve. Apparently there was no chance in this case to bring the patient back.

March 16—Superintendent answered call and administered oxygen and artificial respiration to one Henry Uranich, aged ten, address 2147 St. Vincents Avenue, LaSalle, dying of pneumonia. Oxygen and artificial respiration were administered from 9 A. M. until 3 P. M., at which time patient was declared dead.

July 27—Superintendent answered call from Magnolia, Illinois, and administered oxygen from inhalator and artificial respiration to one Edward F. Jones, a child who was drowned in a fish pond on a farm near Magnolia. After one hour of effort to revive the child, the doctor pronounced him dead.

September 13—Superintendent received a call from the Midland Electric Coal Corporation at Atkinson, Illinois, and administered oxygen from inhalator and artificial respiration for two hours to one Joseph O'Berle, who was electrocuted at the mine. Patient could not be revived.

October 2—Superintendent answered call to Seventh and Joliet Streets, LaSalle, Illinois, and for two hours administered oxygen from inhalator and artificial respiration to Mrs. Ella Schulte, who had been overcome by illuminating gas. Doctor pronounced patient dead.

SPRINGFIELD STATION.

January 20—Superintendent answered call and proceeded with inhalator and apparatus to Allis Chalmers Manufacturing Company, Springfield, to rescue and revive a man who had gone down in a tank. Springfield fire department had already responded to a similar call and had rescued and revived the patient.
